

Ultra LDO 1A Linear Regulator With Adjustable & Bypass Pin

FEATURES

- Guaranteed 1A Output Current.
- Fast Response in Line/Load Transient
- Wide Operating Voltage Ranges: 2.3V to 6.0V.
- 0.1 μ A Shutdown Standby Current
- Low Quiescent Current: < 60 μ A.
- Fixed: 1.2V, 1.5V, 1.8V, 2.0V, 2.5V, 2.7V, 3.0V, 3.3V, 3.5V, 3.7V, 3.8V Output Voltage.
- Output Voltage are available from 0.8–5.0V in Adjustable Version.
- Low Dropout : 440mV at 1A and 2.8V output voltage.
- High PSRR : 70dB at 1KHz.
- Active Low or High Shutdown Control. Current Limit and Thermal Protection.
- Available in \pm 2% Output Tolerance.
- Available in SOT-223 & TO-220 (3 pin) & SOP-8 Exposed Pad (Heat Sink) and TO-252 & TO-263 (3 & 5 pin) Package.

APPLICATIONS

- LCD TV, LCD Monitor, DPF
- Networking
- STB
- DVD, HDD Driver
- Portable AV Equipment
- PC Peripherals

TYPICAL APPLICATION CIRCUIT

Fixed Linear Regulator

Adjustable Linear Regulator

DESCRIPTION

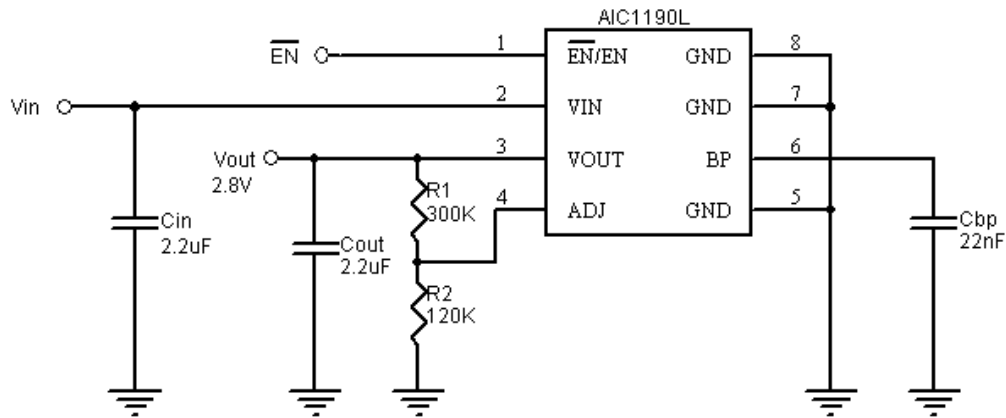

A low noise, high PSRR and ultra low dropout linear regulator AIC1190 is optimized for low ESR ceramic capacitors operation with 1A continuous current.

The AIC1190 offers high precision output voltage of \pm 2% tolerance. Output voltage can also be adjusted for those other than the preset values.

A noise bypass pin is available for further reduction of output noise. The bypass pin could be floating if it's unnecessary. At 1A load current and 2.8V output voltage, a 440mV dropout is performed. The quality of low quiescent current and low dropout voltage makes this device ideal for battery power applications. The high ripple rejection and low noise of the AIC1190 provide enhanced performances for critical applications such as cellular phones, and PDAs.

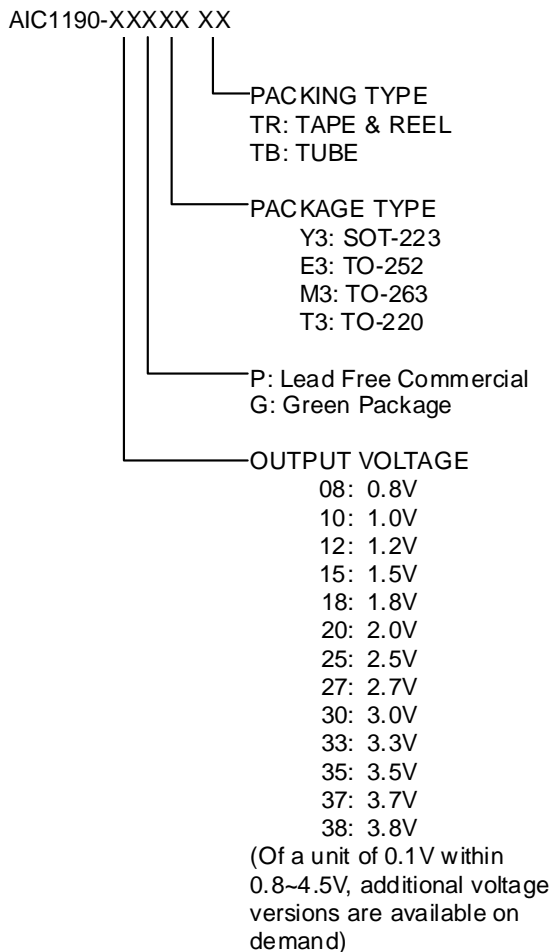

In addition, a logic-level shutdown input is included, which reduce supply current to less than 0.1 μ A (typ.) in shutdown mode with fast turn-on time less than 100 μ s. The AIC1190's current limit and thermal protection provide protection against any overload condition that would create excessive junction temperatures.

■ BLOCK DIAGRAM

■ PIN DESCRIPTION

- VIN – Power supply input pin. Bypass with a 2.2 μ F capacitor to GND
- GND – Ground.
- VOUT – Regulator Output pin. Sources up to 1A.
- $\overline{\text{EN}}$ (5 Pin and 8 Pin) – Chip Enable (Active Low). This pin isn't allowed to float.
- EN (5 Pin and 8 Pin) – Chip Enable (Active High). This pin isn't allowed to float.
- BP (5 Pin and 8 Pin) – Bypass pin. It can connect to external 22nF capacitor to GND to reduce output noise. The bypass pin could be floating if it's unnecessary (Keep floating cannot pull low and pull high).
- ADJ (5 Pin and 8 Pin) – The output voltage can either be set by the internal feedback resistors when this pin is grounded, or be set by the external feedback resistors when using a resistive divider.

■ APPLICATION INFORMATION

The AIC1190 is a high performance linear regulator that provides low-dropout voltage and low quiescent-current. The device is available in an adjustable version and fixed output voltages ranging from 1.2V to 3.8V, and the device can supply loads up to 1A.

SHUTDOWN

By connecting \overline{EN} (EN) pin to V_{IN} (ground), the AIC1190 can be shut down to reduce the supply current to 0.1 μ A(typ.). At this operation mode, the output voltage of AIC1190 is equal to 0V.

CURRENT LIMIT

The AIC1190 includes a current limiter, which monitors and controls the maximum output current. If the output is overloaded or shorted to ground, this can protect the device from being damaged.

THERMAL PROTECTION

The AIC1190 includes a thermal-limiting circuit, which is designed to protect the device against overload condition. When the junction temperature exceeds $T_J=150^{\circ}\text{C}$, the thermal-limiting circuit turns off the pass transistor and allows the IC to cool. For continuous load condition, maximum rating of junction temperature must not be exceeded.

INPUT-OUTPUT CAPACITORS

Linear regulators require input and output capacitors to maintain stability. Input capacitor at 2.2 μ F with a 2.2 μ F ceramic output capacitor is recommended.

When choosing the input and output ceramic capacitors, X5R and X7R types are recommended because they retain their capacitance over wider ranges of voltage and temperature than other types.

NOISE BYPASS CAPACITOR

A 22nF bypass capacitor at BP pin can reduce output voltage noise. The bypass pin can be floating if it's unnecessary.

OUTPUT VOLTAGE PROGRAMMING

The output voltage of AIC1190 linear regulator can be set by its internal feedback resistors when the ADJ pin is grounded. In addition, the output voltage of AIC1190 linear regulator can be set by the external feedback resistors when connecting a resistive divider R_1 and R_2 . While connecting a resistive divider, V_{OUT} can be calculated as:

$$V_{OUT} = 0.8 \times \left(1 + \frac{R_1}{R_2} \right)$$

The resistive divider should sit as close to ADJ pin as possible.

POWER DISSIPATION

The maximum power dissipation of AIC1190 depends on the thermal resistance of its case and circuit board, the temperature difference between the die junction and ambient air, and the rate of airflow. The rate of temperature rise is greatly affected by the mounting pad configuration on the PCB, the board material, and the ambient temperature. When the IC mounting with good thermal conductivity is used, the junction temperature will be low even when large power dissipation applies.

The power dissipation across the device is

$$P = I_{OUT} (V_{IN} - V_{OUT})$$

The maximum power dissipation is:

$$P_{MAX} = \frac{(T_{J-max} - T_A)}{R\theta_{JA}}$$

Where T_{J-max} is the maximum allowable junction temperature (150 $^{\circ}\text{C}$), and T_A is the ambient temperature suitable in application.

As a general rule, the lower temperature is, the better reliability of the device is. So the PCB mounting pad should provide maximum thermal conductivity to maintain low device temperature.

■ PHYSICAL DIMENSIONS

● SOT-223 PACKAGE OUTLINE DRAWING

- Note: 1. Refer to JEDEC TO-261AA.
 2. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion or gate burrs shall not exceed 6 mil per side.
 3. Dimension "E1" does not include inter-lead flash or protrusions.
 4. Controlling dimension is millimeter, converted inch dimensions are not necessarily exact.
